

Calm Skies Travel — Live Smoke Tests

Fetches the live site and verifies key structural elements are present.

How to run:

Locally: Open `smoke-test.html` in a browser alongside the site (e.g. via a local server like `python -m http.server`) and use `http://localhost:8000/index.html` as the URL.

GitHub Pages: Enter `https://aj-aronoff.github.io/CalmSkiesTravel/` and click Run Tests.

Note: Fetching a different origin requires CORS to be permitted. GitHub Pages serves with permissive CORS headers, so the live URL works directly.
